LAMA KORDS TECHNOLOGIES

SRS DOCUMENT FOR THE BUSINESS ADVERT APP

1. Introduction

1.1 Purpose

This document specifies the software requirements for [App Name], a mobile and web-based advertising platform that connects accommodation businesses (hotels, lodges, guest houses, villas, apartments, resorts, and homestays) with customers seeking to discover and book stays. This SRS is intended for use by the development team, project supervisors, and stakeholders involved in the design, implementation, and evaluation of the system.

1.2 Scope

[App Name] will allow business owners to list and advertise their accommodation properties, customers to search, browse, and review listings, and administrators to moderate and manage platform content and advertising packages. The system will be delivered as a mobile application (Android/iOS) with a companion web interface, supporting listing discovery, business promotion, and customer engagement through reviews and direct contact features.

The system includes in-app booking and reservation functionality with integrated online payment via bank and mobile money, as well as ride-hailing booking support.

1.3 Definitions, Acronyms, and Abbreviations

Term	Definition
SRS	Software Requirements Specification
FR	Functional Requirement
NFR	Non-Functional Requirement
Listing	A published advertisement for an accommodation business
Business Owner	A registered user who manages one or more listings
Admin	A platform administrator with moderation and management privileges
UI	User Interface
API	Application Programming Interface

1.4 References

1.5 Overview

The remainder of this document describes the overall product context (Section 2), detailed functional and non-functional requirements (Sections 3–4), and system interfaces and data model (Sections 5–6).

---

2. Overall Description

2.1 Product Perspective

[App Name] is a new, standalone system. It is not a modification of an existing product. It will integrate with third-party services for maps/location (e.g., Google Maps API), authentication (e.g., Firebase Auth or social login providers), notifications (push notification services), and potentially payment processing for advertising subscriptions.

2.2 Product Functions (Summary)

- Business discovery and search by location, type, price, and amenities
- Listing management for business owners
- Review and rating system
- Category-based browsing (Resort, Homestay, Hotel, Lodge, Villa, Apartment, Guest House)
- Featured/promoted listing placements (paid advertising)
- Platform moderation and analytics for admins

2.3 User Classes and Characteristics

User Class	Description	Technical Expertise
Customer	Searches for and browses accommodation listings, leaves reviews, contacts businesses	Low–Medium
Business Owner	Registers a business, creates and manages listings, purchases advertising	Low–Medium

User Class	Description	Technical Expertise
Admin	Moderates content, manages users and advertising packages, views analytics	Medium–High

2.4 Operating Environment

- Mobile: Android and iOS devices (via Flutter, based on your other project stack)
- Web: Modern browsers (Chrome, Firefox, Safari, Edge)
- Backend: Cloud-hosted (e.g., Firebase, or a custom backend with a relational/NoSQL database)

2.5 Design and Implementation Constraints

- Must support low-bandwidth conditions common in the target market (Zambia and similar regions)
- Must comply with local data protection expectations
- Initial release excludes in-app payment processing for bookings (advertising payments only)
- The system must integrate with mobile money APIs (MTN MoMo, Airtel Money, Zamtel Kwacha) and a bank payment gateway.
- The system must integrate with a third-party ride-hailing API (e.g., Uber API) for transport booking.
- Payment transactions must be logged and receipts must be retrievable/reprint able at any time.

2.6 Assumptions and Dependencies

- Business owners have access to a smartphone or computer with internet access to manage listings
- Third-party map and notification services remain available and within free/paid tier limits
- Customers do not require an account to browse, but must register to save favorites, leave reviews, or contact businesses (confirm this assumption — see below)

Section 2

Functional Requirements

Customer.

- FR-01: The system shall allow customers to register and log in using email/password or social login.
- FR-02: The system shall allow customers to search and filter listings by location, business type (hotel, lodge, guest house, villa, apartment, resort, homestay), price range, amenities, and ratings.
- FR-03: The system shall allow customers to view detailed listing pages including photos, description, pricing, location map, and contact/business details.
- FR-04: The system shall allow customers to save/bookmark favorite listings.
- FR-05: The system shall allow customers to leave reviews and ratings for businesses they've interacted with.
- FR-06: The system shall allow customers to contact a business directly via in-app messaging, phone, or WhatsApp link.
- FR-07: The system shall allow customers to view business locations on an interactive map.
- FR-08: The system shall notify customers of promotions or new listings matching their saved preferences.
- FR-09: The system shall allow customers to book a (Hotel, lodge, Guest house etc.) room and make payment online via bank, mobile money (MTN, Airtel, Zamtel).
- FR-10: The system shall allow customers to book an uber.
- FR-11: The system shall allow customers to make reservations of the (apartment, villa, homestay, resort, etc.) and make payment online via bank, mobile money (MTN, Airtel, Zamtel).
- FR-12: The system shall allow customers to print a receipt for proof of payment and evidence for the reservation.
- FR-13: The system shall display listings grouped by category on the home screen, allowing customers to browse by business type via icon selection (Resort, Homestay, Hotel, Lodge, Villa, Apartment, Guest House, See All).
- FR-14: The system shall display a "Popular Destinations" section showing trending or highly-viewed locations.

- FR-15: The system shall display a "Recommended" section showing personalized or featured listings to the customer.
- FR-16: The system shall provide bottom navigation with Home, Explore, Search, and Profile sections.
- FR-17: The system shall display the customer's profile photo and name on the home screen after login.
- FR-18: The system shall provide an "Explore" view allowing customers to browse listings beyond the home screen recommendations.
- **FR-28**: The system shall allow unauthenticated (guest) users to search and view listing details, but shall prompt registration/login when attempting to save, review, or contact a business.

Business Owner

- FR-1: The system shall allow business owners to register and create a business profile, subject to verification.
- FR-2: The system shall allow business owners to create, edit, and delete listings (with title, description, images, pricing, amenities, location).
- FR-3: The system shall allow business owners to upload multiple images per listing.
- FR-4: The system shall allow business owners to respond to customer reviews.
- FR-5: The system shall allow business owners to view analytics on their listing (views, clicks, inquiries).
- FR-6: The system shall allow business owners to select and pay for advertising/promotion tiers (e.g., featured listing, banner ads).
- FR-7: The system shall allow business owners to manage their subscription/payment status.
- FR-8: The system shall allow business owners to view and approve payment (if service is available) or disapprove payments (if service is unavailable) towards reservations.

Admin

- FR-1: The system shall allow admins to approve or reject new business registrations.
- FR-2: The system shall allow admins to moderate listings and reviews (edit/remove inappropriate content).

- FR-3: The system shall allow admins to manage user accounts (suspend, delete, reinstate).
- FR-4: The system shall allow admins to manage advertising packages and pricing tiers.
- FR-5: The system shall allow admins to view platform-wide analytics (active businesses, customer traffic, revenue).
- FR-6: The system shall allow admins to send platform-wide announcements or notifications.

Non-Functional Requirements

- NFR-01 (Performance): The system shall load search results within 2 seconds under normal network conditions.
- NFR-02 (Scalability): The system shall support a growing number of concurrent users and listings without significant performance degradation.
- NFR-03 (Usability): The system shall provide an intuitive UI requiring no more than 3 taps/clicks to reach any listing from the home screen.
- NFR-04 (Security): The system shall encrypt sensitive data (passwords, payment info) in transit and at rest.
- NFR-05 (Availability): The system shall maintain 99.5% uptime.
- NFR-06 (Compatibility): The system shall be accessible via web browsers and mobile devices (Android/iOS).
- NFR-07 (Maintainability): The system shall follow a modular architecture to allow easy updates and feature additions.
- NFR-08 (Reliability): The system shall handle failed transactions (e.g., payment failures) gracefully with clear error messages.
- NFR-09 (Data Backup): The system shall perform automated daily backups of business and user data.
- NFR-10 (Legal/Compliance): The system shall comply with data protection regulations relevant to Zambia and any applicable regional frameworks.
- NFR-11 (Freshness): "Popular Destinations" and "Recommended" listings shall refresh at least once every 24 hours based on view count, bookings, or active promotion status.

- NFR-12 (Security/Compliance): The system shall comply with PCI-DSS or equivalent standards for handling online payment data, and shall not store raw card/mobile money credentials.
